Preface

The book you are currently holding contains the proceedings of the 6th WSEAS International Conference on CIRCUITS, SYSTEMS, ELECTRONICS, CONTROL & SIGNAL PROCESSING (CSECS '07) which was held in Cairo, Egypt, December 29-31, 2007

The WSEAS CSECS Conference was held in Singapore (2002 and 2003), in Rethymno, Crete, Greece (2004), in Rio de Janeiro, Brazil (2005), in Dallas, USA (2006) and this year in Cairo, Egypt. The Society (WSEAS) has also organized many other separate or joint conferences on Circuits, Systems, Electronics, Control & Signal Processing and the relevant titles could be retrieved from the web site: www.worldses.org/history.htm

The biggest conference of the society is the CSCC (Circuits, Systems, Communications and Computers) that takes place each year in July and received approximately one thousand papers. Look for example:

http://www.wseas.org/conferences/2008/greece/

Browsing this volume you can enjoy new, original, fresh ideas on Circuits, Systems, Electronics, Control, Signal Processing, Communications, Computers with several theoretical results and applications, new numerical schemes, new efficient algorithms from many laboratories from important universities and research centers.

The Book is composed by seven parts. In part I, you can read very interesting topics and applications on Circuits and Electronics, while in Part II we have selected important papers on Systems Theory. In Part III, we have very strong contributions in Control Theory and Advanced Control Applications. The Part IV is dedicated to modern Signal and Image Processing. Part V and part VI are dedicated to Communications and to Computer Science correspondingly.

The 6th CSECS (Cairo, Egypt, December 2007) aims to disseminate the latest research and applications in the afore mentioned fields. The friendliness and openness of the WSEAS conferences, adds to their ability to grow by constantly attracting young researchers. The WSEAS Conferences attract a large number of well-established and leading researchers in various areas of Science and Engineering as you can see from http://www.wseas.org/reports. Your feedback encourages the society to go ahead as you can see in http://www.worldses.org/feedback.htm

We would like to address to each of you a warm invitation for the WSEAS Conferences of February 2008 (that will be held in the University of Cambridge) where our "father" Prof. **Lotfi A. Zadeh** will be for 4th time Plenary Speaker in a WSEAS Congress presenting the Plenary Lecture: "*Toward Human-Level Machine Intelligence*". Details:

http://www.wseas.org/conferences/2008/cambridge/aiked/Plenary1.htm

The contents of this Book are also published in the CD-ROM Proceedings of the Conference. Both will be sent to the WSEAS collaborating indices after the conference: www.worldses.org/indexes

In addition, papers of this book are permanently available to all the scientific community via the WSEAS E-Library.

Expanded and enhanced versions of papers published in these conference proceedings are also going to be considered for possible publication in one of the WSEAS journals that participate in the major International Scientific Indices (Elsevier, Scopus, EI, Compendex, INSPEC, CSA see: www.worldses.org/indexes) these papers must be of high-quality (break-through work) and a new round of a very strict review will follow. (No additional fee will be required for the publication of the extended version in a journal).

We cordially thank all the people of WSEAS for their efforts to maintain the high scientific level of conferences, proceedings and journals.

The Editors

Plenary Lecture I

Security and Biometrics in Modern Communications Networks

Prof. Stamatios Kartalopoulos University of Oklahoma, USA E-mail: kartalopoulos@ou.edu

Abstract: Recently there has been an augmented need to authenticate a person in order to grant authorized access to public buildings, homes, airports, cars, and so on. Current reliable authentication methods use biometric data, which range from a simple signature to eye iris or even to a person's DNA. Authentication is granted by matching previously obtained biometric data that are stored in a database with biometric data obtained at the authentication point. Therefore, a critical part in the authentication process is the communications network itself and the security mechanisms of the bio-database, which may be colocated or be remote. Imagine the various scenarios that can be developed if a malicious person gains access to the bio-database or to the communication network during the authentication process. Therefore, in addition to the sophistication of the biometrics methodology, information security and network security are of serious importance. This presentation highlights aspects of biometrics methods, modern intelligent networks, information security and possible vulnerabilities during the authentication process.

Brief Biography of the Speaker: Stamatios V. Kartalopoulos, PhD, is currently the Williams Professor in Telecommunications Networking at the University of Oklahoma. His research emphasis is on optical communication networks (FSO, long haul and FTTH), optical technology including optical metamaterials, and optical communications security including quantum cryptography and key distribution. Prior to this, he was with Bell Laboratories where he defined, led and managed research and development teams in the areas of DWDM networks, SONET/SDH and ATM, Cross-connects, Switching, Transmission and Access systems. He has

received the President's Award and many awards of Excellence. He holds nineteen patents in communications networks, and he has published more than hundred scientific papers, seven reference textbooks important in advanced fiber optic communications, and has also contributed chapters to other books. He has been an IEEE and a Lucent Technologies Distinguished Lecturer and has lectured at international Universities, at NASA and conferences,. He has been keynote speaker of major international conferences, here maderated executive forume, here been a papeliet of

international Universities, at NASA and conferences,. He has been keynote speaker of major international conferences, has moderated executive forums, has been a panelist of interdisciplinary panels, and has organized symposia, workshops and sessions at major international communications conferences. Dr Kartalopoulos is an IEEE Fellow, chair and founder of the IEEE ComSoc Communications & Information Security Technical Committee, member at large of IEEE New Technologies Directions Committee, and he has served as editor-in-chief of IEEE Press, chair of ComSoc Emerging Technologies and of SPCE Technical Committees, Areaeditor of IEEE Communications Magazine/Optical Communications, member of IEEE PSPB, and VP of IEEE Computational Intelligence Society.

Plenary Lecture II Multi-Time Optimal Control

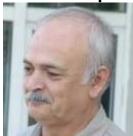

Professor Constantin Udriste
University Politehnica of Bucharest
Faculty of Applied Sciences
Department of Mathematics, Splaiul Independentei 313
Bucharest 060042, Romania

Abstract: This lecture joins some concepts (adjointness, Hamiltonian systems, duality, Riemannian manifolds) that appears in Mechanics, Field Theory, Differential Geometry, and Control Theory in order to create a multi-time maximum principle. Near the classical theory we introduce new types of Euler-Lagrange or Hamilton PDEs for optimal control problems with performance criteria involving curvilinear or multiple integrals and evolutions of multidimensional flow type. The main novel feature of the anti-trace multi-time Euler-Lagrange or Hamilton PDEs is that they are connected to the multi-time maximum principle. The topics include: variational calculus with gradient variations and curvilinear or multiple integral functionals, properties of multi-time Euler-Lagrange operator (changing of the Lagrangian by addition and multiplication, anti-trace multi-time Euler-Lagrange PDEs and new conservation laws), the conversion to multi-time Hamilton PDEs (canonical variables, first kind and second kind of anti-trace multi-time Hamilton PDEs), the multi-time maximum principle approach of anti-trace multi-time Euler-Lagrange or Hamilton PDEs.

Brief Biography of the speaker: Constantin Udriste was born in Turceni, Gorj, Romania on January 22, 1940. He earned his professor title from University of Timisoara in 1963 and his PhD from University Babes-Bolyai from Cluj-Napoca in 1971. Now he is Full Professor of Mathematics and Dean of the Faculty of Applied Sciences at University Politehnica of Bucharest. Also it is President of Balkan Society of Geometers.

Professor Udriste has served on many advisory committees and editorial boards, and was the main organizer of over 10 International Mathematical Meetings. He is author and contributor of over 40 books, over 200 articles to mathematical journals and over 200 papers to mathematical meetings. Topics: group of motion, properties of the tangent bundle, almost coquaternion metric manifolds, variational calculus on Riemannian manifolds, Finsler-Lagrange-Hamilton manifolds, Riemannian convexity and optimization, magnetic dynamical systems, geometric dynamics and optimal control, the theory of spatial mechanisms, solar tower concentrator. A person of incredible energy and entusiasm, Udriste has trained 12 PhD students, many of whom are now faculty members. Prof. Udriste has been the recipient of the following honors and awards: Dragomir Hurmuzescu Prize, Academy of Romania, 1985; Award for Distinguished Didactic and Scientific Activity, Ministry of Education and Instruction of Romania, 1988; Correspondent Member of the Academia Peloritana dei Pericolanti, 1997-; Member Research Board of Advisors, ABI, 1999-. Prize COPIRO - 2000 for Exact Sciences; Premio Anassilaos International 2002, Arte Cultura Scienze.

Plenary Lecture III Recent Developments In The Fluctuation Expansion Of Univariate Functions' Matrix Representations

Professor Metin Demiralp
Informatics Institute
Istanbul Technical University
ITU Bilisim Enstitusu Ayazaga Yerleskesi
Maslak, 34469, Istanbul, Turkey

Abstract: The matrix representations of univariate or multivariate functions play important roles in many mathematical applications of sciences and in many engineering problems. They are mostly employed to truncate infinite dimensional problems for approximations. The residual terms can be, in principle, suppressed as long as there is convergence which depends on the choice of the basis set of the Hilbert space constructed for the problem under consideration. The best basis set choice, of course, is the one which diagonalizes the matrix representation. However it is the main difficulty in these problems. Hence, a new way is needed to reflect the omitted terms'

contributions to the truncated matrix representation. This has been done, at least, in one way which is called "Fluctuation Expansion". A very important practical fact is revealed through this new concept: "A truncated matrix representation of a univariate function can be efficiently approximated, within quite high precision, by a matrix which is the image of the independent variable's same type truncated matrix representation under the considered univariate function". This is called Fluctuationless Approximation. The fluctuationless approximation can also be improved by adding correction terms which contain certain type universal matrices, fluctuation matrices. The construction of these terms was quite cumbersome and containing infinite series which cause new trun- cation errors. Our recent efforts have changed this undesirable structures to compact analytical ones by using Cauchy theorem of complex analysis through certain appropriate operator argumented contour integrals. The geometric series expansion of the kernels of these integrals, and, the separation to rather simple matrix inverses and the going back via Cauchy theorem again enable us to get compact formulae for the fluctuation involving correction terms. This presentation focuses on certain level details of this procedure.

Brief Biography of the speaker: Metin Demiralp was born in Turkey on 4 May 1948. His education from elementary school to university was all in Turkey. He got his BS, MS, and PhD from the same institution, Istanbul Technical University. He was originally chemical engineer, however, through theoretical chemistry, applied mathematics, and computational science years he is working on methodology for computational sciences. He has a group (Group for Science and Methods of Computing) in Informatics Institute of Istanbul Technical University (he is the founder of this institute). He collaborated with the Prof. H. A. Rabitz's group at Princeton University (NJ, USA) at summer and winter semester breaks during the period 1985--2003 after his 14 months long postdoctoral visit to same group in 1979--1980.Metin Demiralp has roughly 70 papers in well known scientific journals and is the full member of Turkish Academy of Sciences ince 1994. He is also a member of European Mathematical Society and the chief--editor of WSEAS Transactions on Mathematics currently. He has also two important awards of Turkish scientific establishments.

Plenary Lecture IV Extended Surfaces Heat Transfer Processes – Class of Approximate and Exact Solutions

Professor Andris Buikis

Institute of Mathematics and Computer Science
University of Latvia, Raina bulv. 29, Riga, LV1459, LATVIA
E-mail: buikis@latnet.lv

Abstract: Systems with extended surfaces (with fins and/or spines) have very broad field of applications: from space apparatus, engines, conditioners, fridges etc. to cooling systems for microchips of PC. From praxis point of view the mathematical description (mathematical models) must be formulated as conjugated problem. In other words, the determination of temperature fields in solid system with extended surfaces can't be disconnected from the calculation of the temperature and hydrodynamic fields in the flowing around of the system media (gas or fluid). It means that the boundary conditions on the surface of the system are essentially non-

homogeneous. In this talk there is presented an original (based on the Green function's method) approach for the determination of the exact solutions in the systems with extended surfaces of quite complicated geometrical and thermal structure. This approach is applicable for both - steady-state and transient processes and it reduces the problem for the partial differential equations to the system of the 2nd kind Fredholm integral equations (the number of integral equations is equal to the number of canonical elements in the systems with extended surfaces).

Biography of the speaker: From http://www.lza.lv/scientists/buikis.htm Experience: Junior Researcher, Senior Researcher, Computing Centre, University of Latvia, 1962 - 1972 . Assistant Professor and Head of Chair of Applied Mathematics, Faculty of Physics and Mathematics, University of Latvia, 1972 - 1976. Assistant Professor and Head of Chair of Differential Equations and Numerical Methods, Faculty of Physics and Mathematics, University of Latvia, 1976 - 1984 . Senior Researcher, Faculty of Physics and Mathematics, University of Latvia, 1984 - 1986. Assistant Professor, Chair of Differential Equations and Numerical Methods, Faculty of Physics and Mathematics, University of Latvia, 1986 - 1988. Senior Researcher, Head of Laboratory of Mathematical Physics, Institute of Physics, Latvian Academy of Sciences, 1988 -1991. Director, Institute of Mathematics, Latvian Academy of Sciences and Latvian University, 1991 - 1996; 2003 - . Head of Laboratory of Mathematical Physics and Head of Scientific Council, Institute of Mathematics, 1996 - . Director, Science and Dialogue Centre of Latvia, 1993 - . Head of Laboratory of Mathematical Physics (1996 -) and Head of Scientific Council (1996 - 2003), Institute of Mathematics, Latvian Academy of Sciences and Latvian University . Honours and Awards: Corresponding Member, Latvian Academy of Sciences, 1992 - 1997. Full Member, Latvian Academy of Sciences, 1997. The Latvian Academy of Sciences Piers Bohl Prize for a cycle of papers "Method of Conservative Averaging, Theory and Applications", 2005. Member of Board, Soros Foundation - Latvia, 1997. Head of "Spidola" Council, Culture Foundation of Latvia, 1987 - 1992 . Member of Board, Vidzemes University College, 1996 - 1998 . Professional Activities and Memberships: Member, Senate of the Latvian Academy of Sciences, 1994 - , Member, Vidzeme University College Advisory Board, 1997-2002, Vice-Chairman (in Mathematics), Latvian Council of Science Expert Committee on "Physics, Mathematics & Astronomy", 1991 - 1993 . Chairman, Promotion Council for Mathematics, 1992 - . Member, Editorial Advisory Board for Proceedings of the Latvian Academy of Sciences, 1988-1995 . Member, Editorial Advisory Board for Mathematical Modelling and Analysis, 1999- . Member, Editorial Advisory Board for Computational Methods in Applied Mathematics, 2000-. Member of Editorial Advisory Board, journal Mathematical Modelling and Analysis (The Baltic Journal on Mathematical Applications, Numerical Analysis and Differential Equations), Lithuania, 1999-. Editor, Progress in Industrial Mathematics at ECMI 2002, Springer. Member, Editorial Board for International Journal of Applied Mathematical Sciences (IJAMS), 2004 - . Member, Gesellschaft Angewandte Matematik und Mechanik, Germany 1991 - , Member, International Sociological Association, 1998-2002. Member, Americal Mathematical Society, 1999. Holder of state capital share at The Latvian Institute, 1998 -2004. Member, American Mathematical Society, 1999 -

Plenary Lecture V
A Novel Modeling Approach for the Design and
Optimization of Advanced Solid State
Devices Using Genetic Algorithms

Prof. Sherif Michael

Electrical and computer Engineering Dept.

Space Systems Academic Group

Naval Postgraduate School, Monterey, California, 93943 USA

Abstract. A new method for developing a realistic physical model of any type of solid state device is presented. Application to model advanced multi-junction solar cells; Thermophotovoltaics; sensors; as well as other novel solid state devices are introduced in this presentation. Taking into account the high cost of research and experimentation involved with the development of these devices, we present here this novel methodology. An example model of an InGaP/GaAs/Ge multi-junction cell is prepared and is fully simulated. The major stages of the process will be explained and the simulation results are compared to published experimental data. An example of cell parameters optimization is also presented. The use of Genetic Algorithm to optimize this model parameter is demonstrated in a two-part process to refine a given multi-junction solar cell design at near-optimal output power for a desired light spectrum. The flexibility of the proposed methodology is demonstrated and example results are shown throughout the whole process.

Brief Biography of the speaker: PhD - West Virginia Univ, 1983, MS - West Virginia Univ, 1980, BS - Cairo Univ (Cairo), 1974. NPS EXPERIENCE: 2005-Present: Professor, Department of Electrical and Computer Engineering, 1983-2005: Associate Professor, Department of Electrical and Computer Engineering, 1985-Present: Associate Professor, Space System Academic Group TEACHING INTERESTS: Analog and Mixed Mode VLSI, Advanced microelectronics and ASIC digital design, Space Power and Radiation Effect courses (more than 95 courses taught) . RESEARCH INTERESTS: Radiation effects on Hardened, Mil. Spec. devices and design of radiation tolerant ASIC, Gallium Arsenide (GaAs) and BiCMOS VLSI Design Analog circuits design: high speed, high accuracy op amps and applications in A/D converters and digitally controlled programmable active filters, Signal processing: Mixed Mode VLSI design and switched capacitor filters, Radiation and Space effects on Photovoltaic devices, Multi-junction, Gallium Arsenide (GaAs) and Indium Phosphide (InP) solar cells, and Spacecraft power system design, Minority Carrier and Laser Annealing of GaAs and InP Solar Cells Digital circuit design and microprocessor applications BOARDS/MEMBERSHIPS: Registered as a Professional Engineer, Senior member of IEEE, Member of the following IEEE societies: Circuits & Systems Society, Nuclear & Plasma Sciences Society, Solid-State Circuits Society, Member of the Board of Governors of the CAS Society

TABLE OF CONTENTS

Part I: Circuits & Electronics	13
Defining Processing Elements in Dependence Graphs from for-do Programming Constructs Stavros Dokouzyiannis, Argiris Mokios	15
Hierarchical Symbolic Analysis of Analog Circuits Using Two-Port Networks Xiaoying Wang, Lars Hedrich	21
Optimization of an Electric Network Operation by Reactive Power and Voltage Mahmoud s. Awad and Yousif El-tous	27
Current-Starved Pseudo Floating Gate Amplifier Mehdi Azadmehr, Yngvar Berg	31
Analysis of a Lyapunov Function Behavior for Different Design Strategies Alexander Zemliak	35
On the Modelling of Multi-windings Traction Transformers Joseph El Hayek	41

An Auto Calibrator for TIQ Based Flash ADC Designs Ali Tangel, Mehmet Yakut, Mehmet Ayar	47
A Programmable ASIC Design of a Low Sensitivity Sampled Data Filter Sherif Michael	52
Self assembled Quantum dot Mid-infrared Si/Ge Photodetector Fabricated by Pulsed Laser Deposition Mohammed S. Hegazy, Tamer F. Refaat, and Hani E. Elsayed-Ali	57
Self Checking Register File Using Berger Code A. H. Abdulhadi, A Maamar	62
Evaluation of Lighting Controls in Office Buildings L. Doulos, A. Tsangrassoulis, F.V. Topalis	69
Part II: Systems Theory	79
Dynamics of Non-local Systems Handled by Fractional Calculus G. Cottone, M. Di Paola, M. Zingales	81
Reactive Power Requirements of GCIG in a Weak Grid K. S. Sandhu & Shelly Vadhera	90
Design and Implementation of Motion-JPEG on Medical imaging Application <i>Jaejoon Kim and Daewha Jung</i>	96
Perturbation Analysis for the Stationary Distribution of a Markov Chain G. Pérez Lechuga, H. Rivera Gómez, P.J. García González	103
A New Voltage Digital Controller for Electrical Distribution systems Francesco Muzi	109

Discrete Decentralized Observation Schemes of Large Scale Interconnected Systems Malika Zazi and Noureddine Elalami	222
Double fed asynchronous generator connected to an unbalanced electric grid Souad Chebbi - Kamel Djemai - Ourabi Lassaad	227
Robustness in Liquid Transfer Vehicles with Delayed Resonators Maria Tzamtzi, Fotis Koumboulis, Nikolaos Kouvakas, Michael Skarpetis	233
Modelling And Control Techniques For Tuning Stabilizers In Power Systems Jesus R Pacheco P and J Salinas	239
Anti-sway Control for Overhead Traveling Cranes Driven Three-phase Induction Motor Kamal A. Khandakji	245

FPGA Implementation of Induction Motor Vector Control Using Xilinx System Generator Jean-Gabriel Mailloux, Stéphane Simard, Rachid Beguenane	252
A New Sliding Mode Control for Satellite Formation Gao Youtao, Lu Yuping, Xu bo	258
Simulation Study of GTO Based Static Transfer Switch Using MATLAB Ramesh Pachar, Harpal Tiwari, Nikita Jahajharia, Simrath Surana	264
On the Controller Design for the Outpouring Phase of the Pouring Process Maria Tzamtzi, Fotis Koumboulis, Michael Skarpetis	270
Reconfigurable Fault-Tolerant Control System for a Segmented Reflector Telescope Testbed Yeva Komandyan, Helen H. Bousallis, Jose D. Covarrubias, Khosrow Rad, David-Robert Graves, Abdelbassit Alkhatib	278
"MIB-16" FPGA Based Design and Implementation of a 16 bir Microprocessor for Educational Use E. Alaer, A. Tangel, M. Yakut	284
Modeling and Control of a Neutral Time Delay Test Case Central Heating System Nikolaos Kouvakas, Fotis Koumboulis, P. Paraskevopoulos	289
Modelling Techniques And Tuning in Excitation Systems for Dynamic Representation <i>J Salinas and Jesus R Pacheco P</i>	298
Fuzzy Control for Shape Memory Alloy Tendon Actuated Robotic Structure Bîzdoacă Nicu-George, Bîzdoacă Elvira, Petrisor Anca	304
Design and Synthesis of PID Controller Based on Fuzzy Md. Shabiul Islam, Nowshad Amin, Mukter Zaman, M.S.Bhuyan	310
Part IV: Signal Processing	315
Impulsive Noise Removal Image Enhancement Technique Subrajeet Mohapatra,Pankaj Kumar Sa,Banshidhar Majhi	317
Visible Light Source Temperature Estimation Using Digital Camera Photography Anagha M. Panditrao, Priti P. Rege	323
A New Algorithm in Blind Source Separation for High Dimensional Data Sets such as MEG Data Jalil Taghia, Mohammad Ali Doostari, Jalal Taghia	329
A Comparative Study on Multi-sample Fusion Schemes to Enhance Spectrographic Speaker Verification Salina Abdul Samad, Dzati Athiar Raml, Aini Hussain	335
Defect Detection in Thermal Image using Thresholding Technique <i>Rudi Heriansyah and S. A. R. Abu-Bakar</i>	341
Papaya Size Grading using Centroidal Profile Analysis of Digital Image Slamet Riyadi, Hafizah Husain, Aini Hussain and Mohd Marzuki Mustafa	347
Vector Quantization in Text Dependent Automatic Speaker Recognition Using Mel-frequency Cepstrum Coefficient Ahsanul Kabir, Sheikh Ahsan	352

Three-Dimensional Vehicle Pose Estimation from Two-Dimensional Monocular Camera Images for Vehicle Classification U. U. Sheikh, S. A. R. Abu-Bakar	356
An Efficient Method for Robust Height and Position Estimation of Moving Objects Seok-han Lee, Kyung-Hyun Yoon, Jong-Soo Choi	362
Noisy Image Segmentation: General Approach and Application to Textile Inspection Khaled Issa, Hiroshi Nagahashi	368
Feature Extraction by Wavelet Transforms to Analyze the Heart Rate Variability during Two Meditation Technique Kheder G., Kachouri A., Taleb R., Ben Messaoud M., Samet M	374
An FPGA Design of the System for Space/Spatial-frequency Signal Analysis V. Ivanovic, R. Stojanovic, D. Jovanovski	379
The Box Counting Method for Evaluate the Fractal Dimension in Radiographic Images K. Harrar, L. Hamami	385
Electric Fields Intensity around the New 400kv Power Transmission Lines in Libya Sayeh M. Elhabashi, Jamal E. Ehtaiba	390
Optimal Filter Design for Face Classification using Bacteria Foraging Algorithm Aloka Sinha	399
Localization Estimation for Autonomous Aerial Navigation by Matching Images with Different Resolutions <i>Kamel Bensebaa , Mauricio Pozzobon Martins</i>	404
Effecient ECG Signal Classification Using Sparsely Connected Radial Basis Function Neural Network Hafizah Husain, Lai Len Fatt	412
Design and Calibration of an Inertial Navigation Sensor node for Precise Tracking <i>Haytham Qasem Mahamda, Omar Gorgis, Tech., Leonhard Reindl</i>	417
Defect Depth Estimation in Passive Thermography using Neural Network Paradigm <i>Rudi Heriansyah, S. A. R. Abu-Bakar</i>	421
Three-dimensional Motion Tracking by the Parallel Trinocular Chi-Cheng Cheng, Gwo-Long Lin, Chien-Hung Chiang	426
Neural Filters: MLP VIS-A-VIS RBF Network V. R. Mankar, A. A. Ghatol	432
Stroke Analysis of Devnagari Handwritten Characters Prachi Mukherji, Priti Rege	438
Improved Iterative Blind Image Deconvolution Pankaj Kumar Sa, Ratnakar Dash, Banshidhar Majhi, Ganapati Panda	444
Evaluation of Hybrid Vector Quantization and Hidden Markov Model Methods in Noisy Environments <i>Mohd Zaizu Ilyas, Salina Abdul Samad, Aini Hussain, Khairul Anuar Ishak, Ashrani A. Abd. Rahni</i>	448
A Neural Network Based lamging System For Fmri Analysis Implementing Wavelet Method	454

Part V: Communications	461
Overcoming Challenges of Direct Conversion Software Radio Oleg Panfilov, Ron Hickling, Tony Turgeon, Walter Brooks, Kelly McClellan, Looyd Linder	463
Energy Aware Routing in Ad Hoc Networks Radhika D. Joshi, Priti P. Rege	469
Performance of Wideband Mobile Channel on Synchronous DS-CDMA Hamed Al-sharari	476
Next Generation Identity Card: RFID-based Automatic Access Control System for Universities Ahsanul Kabir, Kao-Cheng Huang, Ruiheng Wu, Predrag Rapajic	480
Analysis of Opposing Stream Effect on the Non-uniform Optical Fiber Communication Lines Mohammed Al-gawagzeh, Amjad Hendi	484
Computational Model for Energy Aware TDMA-based MAC Protocol for Wireless Sensor Network System Rozeha A. Rashid, Wan Mohd Ariff Ehsan W. Embong, Azami Zaharim, Norsheila Fisal	489
Design and Analysis of a TDMA Call Assignment Scheme for Cellular Networks Hammed Nassar, Hassan Al-mahdi	495
Network Coding for Ultra Wideband Communication Rahul Sharma, Ranjan Bose	502
Performance Evaluation of Table Driven and Buffer Adaptive WLANs Imam Mahmud Taifur Rahman AL-wazedi, Ahmed K. Elhakeem	507
Evaluation of Orbit Determination Using Dual Ranging Method Mohamed Ibrahim, Mohamed Zahara, Amr Emam, Mohamed Abd Elghany	515
A Broadband Scalable Hierarchical PON for Cost-efficient Fiber Access Networks IStamatios V. Kartalopoulos	521
Using Policy-based MPLS Management Architecture to Improve QoS on IP Network Ruey-Shun Chen, Yung-Shun Tsai, K. C. Yeh, Chia-Ming Sun, H. Y. Chen	527
Pulse 2.45 Fractal Microstrip Patch Antenna M. Ismail, H. Elsadek, E. A. Abdallah, A. A. Ammar	533
Part VI: Computer Science & Applications	539
Using Data Mining to Provide Recommendation Service Ruey-Shun Chen, Yung-Shun, K.C. Yeh, Chia-Ming Sunb, D.H. Yb, and Yip Bak-Sau	541
Mathematical Model of Human Reliability Ritu Soni, Ashmeet Kaur	547
An Hybrid Model of Mathematical Programming and Analytic Hierarchy Process for the GISMR: The Industrial Localization	559

T	Agouti.	Md	Eladnani	A	Tikniouine.	A	Aitouahman

Genetic Algorithm for Optimizing Game Using Users' Adaptation Sangwon Um, Taeyong Kim, Jongsoo Choi	564
Neighborhood Clustering of Web Users with Rough K-Means Ritu Soni, Rajeev Nanda	570
Expert Forecasting for Telekom Malaysia's Decision Support System Noor Fazilatulakma Mohd Zaini, Norazrina Abu Haris, Noor Azhari Md Yusof, Raihana Reh, Fatimah Almah Saaid	575
Deadlock Detection in Discrete Concurrent Systems Mohammad A Al Rababah	582
Design of a Delayed File Loading Module Nakhoon Baek, Suwan Park, Seong Won Ryu, Chang Jun Park	589
Representation of Engineering Drawings in SVG and DXF for Information Interchange Muhammad Abuzar Fahiem, Saima Farhan	592
English-Arabic Transliteration Mohamed Abdel Fattah, Fuji Ren	597
Towards an Automated Multiagent Negotiation System Based on FIPA Specifications Javed Ahmed Shahani, Ghulam Ali, Dr. Zubair A. Shaikh	603
Mobile Ad-hoc Network – A Novel Node Authentication Mechanism Syed Azhar Mahmood, Farhan Ahmed, Zaffar Qureshi, M.N.Jafri	609
Mining Service Repositories for Active Service Yang Fei, Lu Wei	615
On Time Delay Telerobot Control Model Research Jin He, Yulin Wang, Chunfen Lv	619
ADDITIONAL PAPER:	624
The following paper belongs to Part III: Control Theory & Advanced Applications Detection and Recognition of Non-Occluded Objects using Signature Map Sangbum Park, Youngjoon Han, Hernsoo Hah	625
